

**Amendments to the Claims**

*The following listing of the claims will replace all other versions and listings of the claims.*

**In the Claims:**

1. (Currently Amended) A method for stirring a liquid sample containing an analyte and a reagent, said method comprising the steps of:

(A) providing a cell comprising: a liquid sample retaining section having a plurality of particles and with a surface covered with said reagent, and a liquid sample supply inlet, and supplying a liquid sample containing an analyte from said liquid sample supply inlet to said liquid sample retaining section; and

(B) stirring said liquid sample and said reagent by the movement of said particles caused by the flow of said liquid sample in said liquid sample retaining section resulting from the supply of said liquid sample, to separate said reagent from the surface of the particles and to obtain a liquid mixture containing said liquid sample, said reagent, which is dissolved in the liquid sample and said particles,

wherein said reagent includes a specific binding substance capable of specifically binding with an analyte in said liquid sample, and

~~the an~~ electric charge of ~~at least~~ the surface of said particles and ~~the an~~ electric charge of said specific binding substance have ~~[[the]]~~ a same polarity in said liquid mixture.

Claims 2-3. (Cancelled)

4. (Original) The stirring method in accordance with claim 1, wherein the flow of said liquid sample in said step (B) is a flow circulating along the inner face of the wall of said liquid sample retaining section.

5 -15. (Cancelled)

16. (New) The stirring method in accordance with claim 1, wherein said reagent is an antibody.

17. (New) The stirring method in accordance with claim 1, wherein each surface of said plurality of particles comprises polylysine.

18. (New) the stirring method in accordance with claim 16, wherein each surface of said plurality of particles comprises polylysine.
